

Driving better care and outcomes for all patients

Did You Know?

- One in ten chronic care patients experiences a medication-related adverse event within the first 30 days.
- Negative impacts include ineffective treatments, poor outcomes, and fall risks.
- With LTC patients on an average of 10-15 medications, up to 40% of a facility's population may have undetected genomic conflicts with their prescribed medications.
- Side effects and poor pain management from ineffective medications can adversely affect facility star ratings, resulting in significant cuts to reimbursement.

About The Program

The Avendi Rx Medication Risk Management (MRM) platform has been designed to assist in the identification, monitoring, and management of potential issues associated with patient medications. Utilizing a combination of software, services, and clinical support, a personalized Medication Risk Management program drives ongoing value for patients and entire care facilities.

Key Features

Continuous drug-to-gene monitoring software with real-time population risk assessments

Pharmacogenomic alerts prior to fill - improve outcomes and reduce ADEs

Workflows designed for healthcare professionals -enable new billable MTM programs

Patient mobile application provides 24/7 access to a personalized formulary

Benefits to Avendi Rx Patients

- Reduced adverse effects
- Improved medication adherence
- Reduced hospitalizations
- Increased patient safety
